?	Cancel Continue

- 3. Enter your email account information.
  - Full Name: Your name as you would like it to appear.
  - Email Address: Your full email address.

Password: The password for your email account.

Full Name:	John Doe
Email Address:	john@dv-example.com
Password:	•••••
Account must be r	manually configured

Click the Create button when you're ready.

- 4. Mail will attempt to contact the mail server. Then it will display a message: "Account must be manually configured". Click the Next button to complete setup manually.
- 5. Next, enter your incoming mail server information.
  - Account Type: IMAP
  - Mail Server:
    - If you are on the Global Server, please use: mail.globalnaz.org
    - If you are on the Field Server, please use: gnmail.globalnaz.org
  - User Name: Your full email address.
  - Password: The password for your email account.

Account Type:	IMAP POP
Mail Server	mail.dv-example.com
User Name:	john@dv-example.com
Password	•••••

6. Click the Next button to proceed. You will be taken to a second screen to confirm additional details.

Path Prefix:	Optional
Port:	993 🗹 Use SSL
Authentication:	Password

- Path Prefix: Leave this area blank.
- Port: 993 Use SSL.
- Authentication: Be sure that Password is selected from the dropdown menu.

7. Next, we'll configure the Outgoing Mail Server.

Outgoing Mail Se	rver Info
SMTP Server:	mail.dv-example.com
User Name:	john@dv-example.com
Password:	•••••
Cancel	Back Create

- SMTP Server: mail.globalnaz.org
- User Name: Your full email address.
- Password: The password for your email account.
- 8. Click the Create button when you're ready.
- Your email account has been created, but you'll want to verify a few steps before you get started. Select "Preferences" from the Mail menu, and click on the "Accounts" tab from the Preferences window.
- 10. Select your new account from the left hand column.
- 11. Click the "Advanced" tab and uncheck the box to "Automatically detect and maintain account settings."
- 12. Navigate back to the "Account Information" tab. This time, select Edit SMTP Server List... from the *Outgoing Mail Server (SMTP) drop-down menu.* Edit SMTP Server List...
- 13. You will be taken to the SMTP server list. Highlight the Globalnaz account in the list. Click the *Advanced* tab and verify the following settings:

 Be sure the box to "Automatically detect and maintain account settings" is **not** checked!

- Enter port 465 and check the Use SSL box.
- Select "Password" from the Authentication dropdown menu, and make sure the "Allow insecure

authentication" box is NOT checked. If you don't see this option, you may be on a different version of Mail.

Port:	465 🗹 Use SSL	
Authentication:	Password	
	Allow insecure authentication	
User Name:	johndoe@example.com	
Password:	•••••	

You can now close the Accounts window. That's it! You just configured your regional email address on Apple Mail.
